

SOLUTION OVERVIEW

OpenText Document Accessibility

Make content accessible for all your audiences

Increase self-service access

for persons with disabilities

Provide equal access to digital content

Comply with accessibility legislation

Meeting accessibility standards presents a significant puzzle for organizations, but is critical to solve. With inconsistent compositions, ever-changing specifications, and diverse interpretations of legislation, presenting accessible documents to the latest standards is difficult.

Document remediators are tasked with ensuring that digital content is compliant with legislation and made readily accessible when requested by individuals. High-volume content can be easily and efficiently made accessible for persons with disabilities through scalable and efficient transformation solutions, such as [OpenText Automated Output Accessibility](#), but there are still documents that need to be addressed on a case-by-case basis. For these individual pieces of information, organizations need a single tool to transform documents in order to advance past traditional remediation, whether in-house or third-party, and realize cost and time savings.

OpenText Document Accessibility, a companion to our [OpenText Automated Output Accessibility](#) solution, provides a remediation solution that makes it easier for users to transform documents on an ad-hoc basis. The solution enables organizations to easily comply with accessibility standards and regulations such as Section 508, Telecom Section 255 and ADA, ACAA, AODA and more. Built for business users and with ease-of-use in mind, documents are uploaded through the browser-based user interface (UI), where auto-detection algorithms add and edit the tags on the PDF. Through the same UI, users have access to a powerful, intuitive, full-featured remediation environment to edit tags, apply alternate or actual text, add and change headings, modify tables and much more. This provides a straightforward approach to providing a more inclusive experience to underserved individuals.

OpenText Professional Services help you get started right away

The Professional Services team has both deep understanding and practical experience of making customer documents accessible. Working in this field for many years they bring their expertise to the challenges of making different document types accessible, meeting assistive technology and regulatory requirements, and ensuring the solution is correctly configured and integrated with existing customer systems.

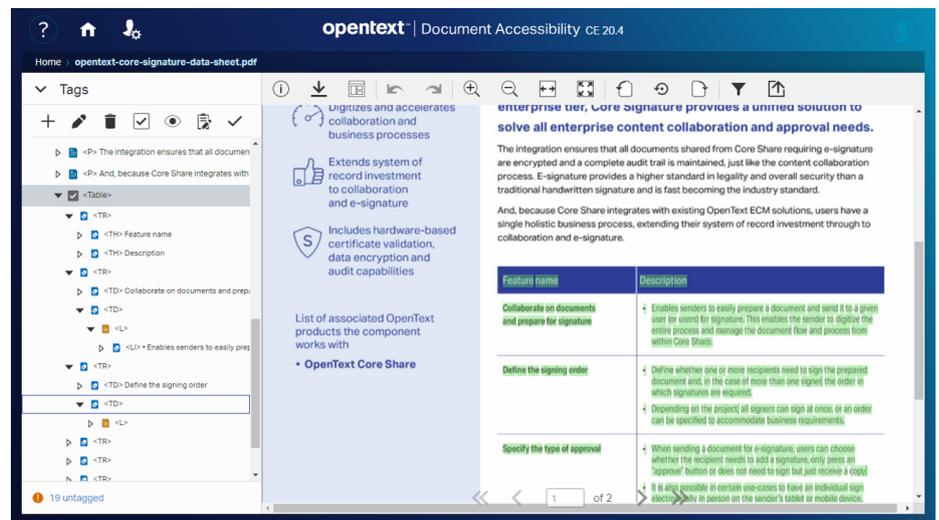

Services include creating accessible customer documents, document accessibility consultancy, product training in accessibility, software installation and project management.

To talk to an OpenText Professional Services expert about this solution or other service offerings, please contact ProfServices@opentext.com, or visit www.opentext.com/services.

Easy transformation of documents

With OpenText Document Accessibility record managers can easily transform documents as needed. Thanks to the built-in auto-detection algorithms, document remediators are only required to verify that tags have been accurately determined and applied, and make minimal edits where necessary. Reading order for the document can be customized through headings and alternate text for images, and table navigation can be ensured by identifying table rows, columns and cells. This ensures that content can be easily defined with a proper structure and layout for maximum comprehension through assistive devices, even for images and tables which are traditionally difficult to understand.

Easily select, tag and group table headers and cells.

Excellent experiences for all audiences

Through OpenText Document Accessibility, organizations can provide an exceptional experience to persons with disabilities. Businesses can generate greater satisfaction and loyalty from this often-overlooked audience by providing an equivalent digital experience, instead of one with barriers to everyday tasks. When an accessible document is requested, it can be swiftly retrieved from archive and transformed in short order, minimizing or eliminating delays.

About OpenText

OpenText, The Information Company, enables organizations to gain insight through market leading information management solutions, on-premises or in the cloud. For more information about OpenText (NASDAQ: OTEX, TSX: OTEX) visit: opentext.com.
