

OpenText Documentum D2

Offers a flexible and intuitive Documentum UI which IT administrators can easily deploy, and users can quickly adopt without training

Lower TCO

Increase user adoption

Reduce risk

Simplify compliance

Traditional ECM platforms can be costly, slow and difficult to use. They often steer users to non-compliant workarounds that force critical content “into the wild,” increasing workloads, cost and risk.

OpenText™ Documentum™ D2 simplifies access to critical business content for content creation and collaboration. The highly-intuitive UI works on common internet browsers on desktop and tablet devices, enabling users to be more productive and accelerating user adoption.

Automated document control ensures compliance with content governance policies, while powerful configuration capabilities significantly reduce the need for custom code. The solution enables business analysts and content developers alike to develop and deploy content-centric solutions quickly, while dramatically lowering costs for system maintenance.

Lower TCO

For IT administrators, Documentum D2 reduces complexity with a powerful configuration framework for creating purpose-built content solutions, often without the need for costly customizations. It can be quickly configured and deployed across the enterprise, and the easy to use Smart View UI reduces training costs.

Using a familiar spreadsheet-like interface, business analysts can set properties that control document sets, creation rules, security models, document lifecycle and auto-naming. Simple configuration empowers business analysts and systems

"OpenText Documentum has proven that if you stick to things and stay consistent, people appreciate it. When I see an engineer uses Documentum to fix something, I know it's worth its weight in gold."

Andrew Mannington
Document Manager
Heathrow Airport Ltd.

administrators to respond to shifting requirements, without engaging specialized developers or costly development cycles.

Increase user adoption

For business users, Documentum D2 delivers an intuitive and personalized user experience on the most common internet browsers. Simplified access to content enables users to be more productive and willing to adopt new business solutions. With purpose-built user experiences, including interface themes, multiple workspaces and custom menus, the intuitive Smart View client brings a fresh, modern look on desktop and tablet devices, helping to drive user adoption of corporate ECM systems.

Reduce risk

Content administrators will appreciate the improved governance that comes from Documentum D2's ease of use and automated document control. This includes instant deployment of configured rules and content policies, metadata and import screens, advanced workflow and auditing capabilities and automatic property inheritance, auto-naming and auto-numbering.

Beyond ensuring document control, Documentum D2 facilitates controlled document collaboration. With threaded discussions, collaborative authoring of large deliverables and the merging of Microsoft® Office document annotations, it enables active collaboration, while reducing risk by practising good governance principles.

Documentum D2 Smart View client home screen with configurable tiles specific to user roles

OpenText Documentum D2 features

Fast configuration and deployment

Simple configuration using a familiar spreadsheet-like interface and instant application deployment of highly configured rules and content policies

Enhanced collaboration

Foster fast online collaboration with threaded discussions, collaborative authoring of large deliverables and merging of Microsoft Office document annotations

Automated content control

Ensure proper control with automated inheritance, auto-naming, auto-numbering, auto-linking and electronic signatures

OpenText Documentum D2 features

Compliance and governance

Configure metadata and import screens; advanced workflow, lifecycle and auditing capabilities

Personalized user experience

Develop purpose-built user experiences with a complete set of tools, including interface themes, multiple workspaces, flexible and extensible widgets and custom menus

Manage virtual documents

Collect multiple documents into an ordered, logical unit that can be conveniently managed and controlled.

Run anywhere

Uses cloud native technologies to simplify deployments and upgrades, making it easier to introduce new features more quickly.

Simple configuration using a familiar spreadsheet-like interface

Simplify compliance

Documentum D2 can be used for a variety of content-centric solutions. This includes tracking documents through review and approval workflows, quickly finding content via search and navigation with dynamic security filters and managing controlled documents in regulated industries, such as Life Sciences, Financial Services and Public Sector.

Organizations can define common policies globally to ensure consistency with corporate standards and regulatory requirements, while individual business units can manage the discrete configurations that apply just to them. New solutions can be quickly introduced, as only the differences to the global rule set need to be validated. As rules change, organizations can quickly update and instantly deploy them, eliminating lengthy delays while application changes are coded and tested.
